## PROFILE

I have 5 years of experience running start-ups right from the idea stage at the world's most connected tech community - Level39.

Over these years, I have developed a strong passion for software development in particular front-end. Having taken an intensive web development course in one of the highest-ranked Bootcamps in Europe - Ironhack, and building several projects I have become a confident front-end developer. Currently, holding a part-time position as a Junior Developer at Fortu Wealth.

I love building things, creating new stuff, learning new technologies and working with others to bring brilliant products. I believe that with my experience, motivation and discipline (and the discipline of people with a finance industry background is well known) I will bring great value to the company and become a valuable asset with a full commitment to delivering my work.

## SKILLS

React	Redux	Material UI	Bootstrap
JavaScript	RESTful API	Git	GitHub
Axios	Google APIs	JIRA	Figma
HTML	CSS	VSCode	Heroku

## PROJECTS

### Redlight - AI-powered Movie App

Redlight is an AI-powered Movie App built on React that lets the users search for the movies, see movie details, including cast, trailers, and websites, and get recommendations. Users can create an account and add movies to their watchlists.

- Used **Redux** for state management, as well as for fetching various data from The Movie **API Database**

- Performed GET request to fetch the data and **POST** request for adding/removing movies to/from watchlist within the usage of **Axios**
- Utilised **Material UI** components for the user interface as well as for implementing toggler event for dark and light mode
- Alan **AI integrated** to render the **voice commands** of the user for logging in/out, searching for the movies, changing the mode

### Traveller - AI-powered travelling map website

Traveller is an AI-powered travelling map website built on React for finding restaurants, hotels and attractions based on the location of the user.

- Used **Google Maps API & Google Places API** to fetch data for the current location of the user, or for the location being searched for the purpose of features of geolocation
- Utilised the marketplace for API, **RAPID API**, to render the result based on the latitude and longitude of the user Integrated
- Alan AI for listening to **voice commands** and rendering the result
- Material UI components were utilised for the user interface of the website

### Envio - cloud hosting website

Envio is a cloud hosting website built using **pure HTML and CSS**.

- The responsive website was built using the mobile-first approach using the **BEM convention** to make the code more readable and cleaner
- The images and fonts were **optimised for performance**

## EDUCATION

### Front-End Web Development , Bootcamps

- Took intensive web development course in one of the highest-ranked Bootcamps in Europe - **Ironhack**
- Covered Front-End topics in more depth at **Code with Mosh** is one of the top-ranked online courses
